Azure

Gape ice

Red Bicolour

Scarlet

Streptocarpus ‘Ladyslippers™’, available as vegetative liners from tissue culture, features a compact growth habit and is ideal for 10–30 cm pots, spring sales, combination baskets, and patio containers. It grows best in moist, well-drained soil. Maintain night temperatures between 18–20°C and day temperatures between 18–27°C. Avoid temperatures above 35°C, as they can lead to yellowing leaves and smaller flowers. Watch for pests such as aphids, thrips, whiteflies, and mealybugs, and use preventive fungicides to protect against Botrytis and Crown Rot.
