JD Propagation

CUT FLOWER

2026-2027

JD Propagation

We are pleased to introduce JD Propagation's latest cut flower catalogue.

This collection has been carefully developed to respond to what truly matters in today's market — strong performance, reliable productivity, and varieties that stand out at retail. Each selection has been evaluated not only for its visual appeal, but for how it performs across the supply chain, from propagation to final sale.

Since 2009, we have continuously strived to meet the exacting standards of our customers. Our focus is on quality and reliability – on time in full.

We work closely with growers to ensure long-term success in the market. With a deep understanding of market demand across regions and channels, we focus on selecting and propagating varieties that not only perform consistently in production, but also meet evolving retail expectations.

Our commitment is to continuously introduce varieties with proven performance, improved disease tolerance, and the resilience to perform under challenging climatic conditions — helping our partners stay competitive in a rapidly changing market.

Craspedia | Paintball
Pop

Craspedia | Paintball
Poppy

Craspedia

- Cooler temperatures after transplanting improve the uniformity of flowering.
- Long day plant. A day length > 12 hours will result in flower initiation.
- High light intensity and warm temperatures shorten the total crop time.
- Harvest when 20-30 % colour showing.
- Does not tolerate frost.
- Avoid overwatering.
- Stem length 60 to 70 cm.
- 15 -20 stems per plant/annum
- Seed raised
